SOFTWARE ENGINEER

TECHNICAL PROJECTS

Real Estate App- [Frontend](#) and [Backend](#) | Technology- React/Rails/Redux/CSS
[Exhibits relevant data for buyers and sellers via searchable listings.](#)

- Created React Forms to catch client inputs and store them to Redux and Rails backend.
- Utilized Rails Rest API to store buyer and seller information in the MySQL database.
- Used Redux to render stored data to clients upon request.

Blogging Website- [Frontend](#) and [Backend](#) | Technology- Javascript/Rails/Bootstrap
[Devised application to save content with filtering capability.](#)

- Enhanced Frontend UI/UX created with Javascript and Bootstrap CSS.
- Simplistic optimized Rails backend with active serializers returning individual blogs.
- Utilized fetching feature to the backend that lists all blogs upon request.

City Spots- [Github](#) | Technology- Rails/MySQL
[The application shows listings and filters property data by price.](#)

- Created Front and Backend solely with Rails
- MySQL stored property data with active serializers to render specific content
- Implemented sorting method via Models to filter property data by price
